

# Plank-Nicholson Bus Rapid Transit

## Technical Memorandum: Hazardous Material Sites

<b>To:</b> Capital Area Transit System	<b>Date:</b> April 3, 2020
<b>From:</b> HNTB Corporation	
<b>Cc:</b> Federal Transit Administration	
<b>Project:</b> Plank-Nicholson Bus Rapid Transit	

### Data Collection/Methodology

Database information was gathered from the U.S. Environmental Protection Agency (EPA) Facility Registry Service (FRS), and the Louisiana Department of Environmental Quality (LDEQ). These databases were mapped and reviewed utilizing the American Society for Testing and Materials (ASTM) E 1527-13 recommended database search distances (in relation to proposed station areas) as noted after each category listed in **Table A** below. The types of hazardous material facilities in the vicinity of the project area, and the federal or state programs under which category they are listed, include the following:

**Table A – ASTM Recommended Database Search Distances**

Standard Environmental Record Sources	Minimum Search Distance
<i>Federal NPL – National Priority List</i>	1 mile
<i>Delisted NPL (Non-NPL) – delisted National Priority List</i>	½ mile
<i>Federal CERCLIS - Comprehensive Environmental Response, Compensation, &amp; Liability Information System (Superfund)</i>	½ mile
<i>Federal CERCLIS NFRAP – CERCLIS (Superfund) No Further Remedial Action Planned</i>	½ mile
<i>Federal RCRA CORRACTS TSD – Resource Conservation and Recovery Act Treatment, Storage, and Disposal Facilities Listed on the Corrective Action Tracking System</i>	1 mile
<i>Federal RCRA non-CORRACTS TSD List</i>	½ mile
<i>Federal RCRA Generators List</i>	Property & adjoining properties
<i>Federal ERNS – Emergency Response Notification System List (spills &amp; accidents)</i>	Property only
<i>Federal institutional control/engineering control registries</i>	Property only
<i>State equivalent NPL</i>	1 mile
<i>State equivalent CERCLIS</i>	½ mile
<i>State landfills and/or solid waste disposal sites</i>	½ mile
<i>State Leaking Storage Tank list</i>	½ mile
<i>State Registered Storage Tank list</i>	Property & adjoining properties
<i>State institutional control/engineering control registries</i>	Property only
<i>State voluntary cleanup sites</i>	½ mile
<i>State Brownfield sites</i>	½ mile

## Existing Conditions

The database review was initially screened using the distances defined in **Table A**. The sites were then queried using a 500-foot search radius from station areas to determine those sites that were within the vicinity of the proposed stations. The review indicated that there are 74 properties (unique addresses) with listed or potential hazardous material concerns located in the vicinity of the proposed stations (see **Exhibits A-1 through A-17**, and **Table B, Hazardous Materials Sites in Vicinity of Station Areas**, in the **Appendix**). The program system acronyms of the types of environmental interest listed in **Table B** include the following:

**\*Data Source and Environmental Interest Type Acronyms:**

**ACRES** – Assessment, Cleanup & Redevelopment Exchange System (**Brownfields** properties)  
**AIR** – Air Facility Program (air emissions)  
**AFS** - Air Facility System (air emissions)  
**AQS** - Air Quality System (air emissions)  
**BR** – Hazardous Waste Biennial Reporter  
**CEDRI** - Compliance and Emissions Data Reporting Interface  
**E-GGRT** – Electronic Greenhouse Gas Reporting Tool  
**EIS** – Emission Inventory System (criteria and hazardous air pollutant inventory)  
**ICIS** - Integrated Compliance Information System (formal enforcement action and enforcement/compliance activity)  
**LA-TEMPO** – Louisiana Tools for Environmental Management and Protection Organizations  
**LA-DEQ** – Louisiana Department of Environmental Quality  
**NCDB** – National Compliance Data Base  
**NPDES** – National Pollutant Discharge Elimination System  
**RCRAINFO** - Resource, Conservation and Recovery Act Information  
**LUST** – Leaking Underground Storage Tank  
**TRIS** -Toxics Release Inventory  
**TSCA** - Toxic Substances Control Act

\*For detailed descriptions of Environmental Interest Types and Acronyms, refer to the following:  
Environmental Protection Agency. 2013. FRS Environmental Interest Types. Updated June 7, 2013.  
[http://www.epa.gov/sites/production/files/2015-09/documents/interest\\_types.pdf](http://www.epa.gov/sites/production/files/2015-09/documents/interest_types.pdf)

Some of the hazardous material sites located adjacent to or within approximately one block of the proposed station locations contain or contained underground storage tanks for uses such as gas stations/convenience stores, auto repair/service shops, auto dealerships, and other light industrial or commercial uses. Others had, or have the potential for storing hazardous materials, emitting air pollutants, generating various quantities of hazardous waste, or utilizing chemicals for operations. Through aerial photography review, it was apparent that hazardous materials on the adjacent or nearby sites are contained within the buildings or likely in remote areas set back substantially from the street right-of-way line. Regarding gas stations, the underground storage tanks are not located adjacent to the street rights-of-way. A review of the LDEQ's Leaking Underground Storage Tank database revealed there are no sites located within the 500-foot search radius around the station areas.

### ***TramLink BR Identified Sites***

As part of the analysis the sites identified as part of the TramLinkBR Environmental Assessment were reviewed to determine potential impacts with the updated bus rapid transit (BRT) station locations. Of the sites identified, three were adjacent to proposed BRT stations. All three have

gone through cleanup efforts or have been redeveloped. Those sites adjacent to proposed station areas are discussed below.

**Cracker Barrel #3** – This site is located at 3135 Nicholson Drive. Document ID# 9447406, dated 8/22/2014, within LDEQ’s Electronic Document Management System showed that contaminated soil, groundwater, and the underground storage tanks were removed from the site in 2014 and no further action is required. Due to the removal of the tanks and contaminated soil/groundwater and no further action being required, the site would pose a low risk..

**Coterie Builders, Inc.** - This site is located at 1429-1435 Nicholson Drive. Based on data collected for the TramlinkBR Environmental Assessment, the site had soil samples completed which indicated a “clean” closure. This site no longer appears in the LDEQ database. Due to the “clean” closure and the site no longer appearing in the LDEQ database, the site would pose a low risk.

**Former Filling Station** – This site is located at 451 Florida Street. Based on 1951 historic fire insurance map data collected for the TramlinkBR Environmental Assessment, the site was previously a filling station. This site has since been developed into an office tower and would pose a low risk.

### **Brownfield Sites Adjacent to Stations**

There are three Brownfield properties near the proposed station areas based on a search of the EPA FRS. The EPA defines a Brownfield site as “...a property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant’ (EPA, 2015). Two of the Brownfield sites have gone through cleanup procedures, and one site that appears to be in the incorrect location based on site descriptions. Those that are adjacent to proposed station areas are discussed below.

**500 Saint Louis Street** – This Brownfield site is shown in the downtown area at 500 Saint Louis Street. A review of the records showed 24 unique facilities at this address. A review of the facility names revealed that, of those that were able to be found through an internet search, most of the facility names reference unique sites across Baton Rouge. Based on the appearance that the location is incorrect and that the location listed is located over a block to the northwest of the proposed station location, the proposed station would not affect this location.

**BR 169 OSBR DUANE & GLACIER STREET LOTS**– This Brownfield site is located east of Nicholson Drive between Duane Street and Glacier Street. The EPA’s Facility Registry System stated that a Phase 2 Environmental Assessment was completed for this site in 2004 and determined cleanup was required. Cleanup at this site was completed in 2007 and a No Further Action/Cleanup Completion Document was issued October 12, 2007.

**Pelican Nest Learning and Resource Center**– This Brownfield site is located at 2750 Nicholson Drive. The LDEQ issued a No Further Action – At This Time for the site on October 12, 2007. This site is located on an adjacent block to the proposed stations.

### ***Superfund Sites Adjacent to Stations***

A review of the EPA FRS GIS database identified the Devils Lake superfund site adjacent to one of the proposed station locations. Upon further review, it was determined that the Devil's Lake site is located approximately 10 miles north of the City of Baton Rouge<sup>1</sup>. Due to the distance from the project location, there would be no impacts related to this site.

The database search also identified the Bayou Baton Rouge superfund site adjacent to one of the proposed station locations. The Data lists the site as being in Scotlandville which is located north of Baton Rouge. A review of superfund sites in Louisiana shows that due to location that is likely related to the Petro-Processors of Louisiana which notes that it includes a portion of Bayou Baton Rouge<sup>2</sup>. Due to the distance from the project location there would be no impacts related to this site.

### **Impacts / Environmental Consequences**

The proposed BRT project would not require the acquisition for additional right-of-way or easements at most station locations. However, some station areas may require minimal linear amounts of ground disturbance outside of existing right-of-way. Based on existing parcel data there are 21 stations that potentially require these temporary linear easements located adjacent to identified hazardous material sites, as indicated in **Table B**. These locations will be refined during the design phase once survey of the corridor is available. Ground disturbance and excavation for new pavement and footings of vertical station elements, such as shelters and markers, will occur at station development areas within the existing transportation right-of-way, and would be to a depth of approximately 24 inches or less. Only minimal ground surface disturbance would take place adjacent to the station areas. Hazardous materials associated with adjacent or nearby properties are contained within the buildings or likely in areas set back substantially from the street right-of-way line. It is unlikely that past or present contaminant releases on the properties, at or near the surface, would have migrated horizontally to the street right-of-way. As a result, there is a relatively low risk for contamination during construction at adjacent or nearby hazardous material sites, as noted in **Table B**.

### ***Brownfield Sites Adjacent to Stations***

The two Brownfield sites near proposed station areas have gone through cleanup, are in the process of cleanup, or have been determined to not require cleanup as discussed above. The other site is likely an incorrect location in the EPA FRS as discussed previously.

Based on the cleanup status at these sites, there is a low risk of contamination during station construction at these locations.

### ***Potential for Encountering Contaminated Groundwater***

Although soil boring data is not available, the Natural Resources Conservation Service (NRCS) soil survey data for the project area was reviewed regarding available water table depth information. To establish the Area of Interest, the Area of Potential Effect developed for the Section 106 was utilized. The data indicated that the water table depth in the majority (75.8%) of the areas around the station locations is greater than 6.5 feet (NRCS, 2020). Due to the NRCS

---

<sup>1</sup> Environment Protection Agency (EPA). 2015. Devil's Swamp Lake Site Status Summary. Updated November 6, 2018. Accessed March 2, 2020. <https://semspub.epa.gov/work/06/500014767.pdf>

<sup>2</sup> Environment Protection Agency (EPA). Petro-Processors of Louisiana, Inc. Accessed March 2, 2020. <https://cumulis.epa.gov/supercpad/SiteProfiles/index.cfm?fuseaction=second.Cleanup&id=0600442#Status>

available water table depth information indicating the water table depth in the areas along the project corridor is greater than 6 feet , the likelihood of encountering potentially contaminated groundwater during excavation activities is very low.

### **Conclusion** (text for Inclusion in CE Document)

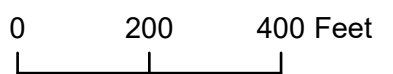

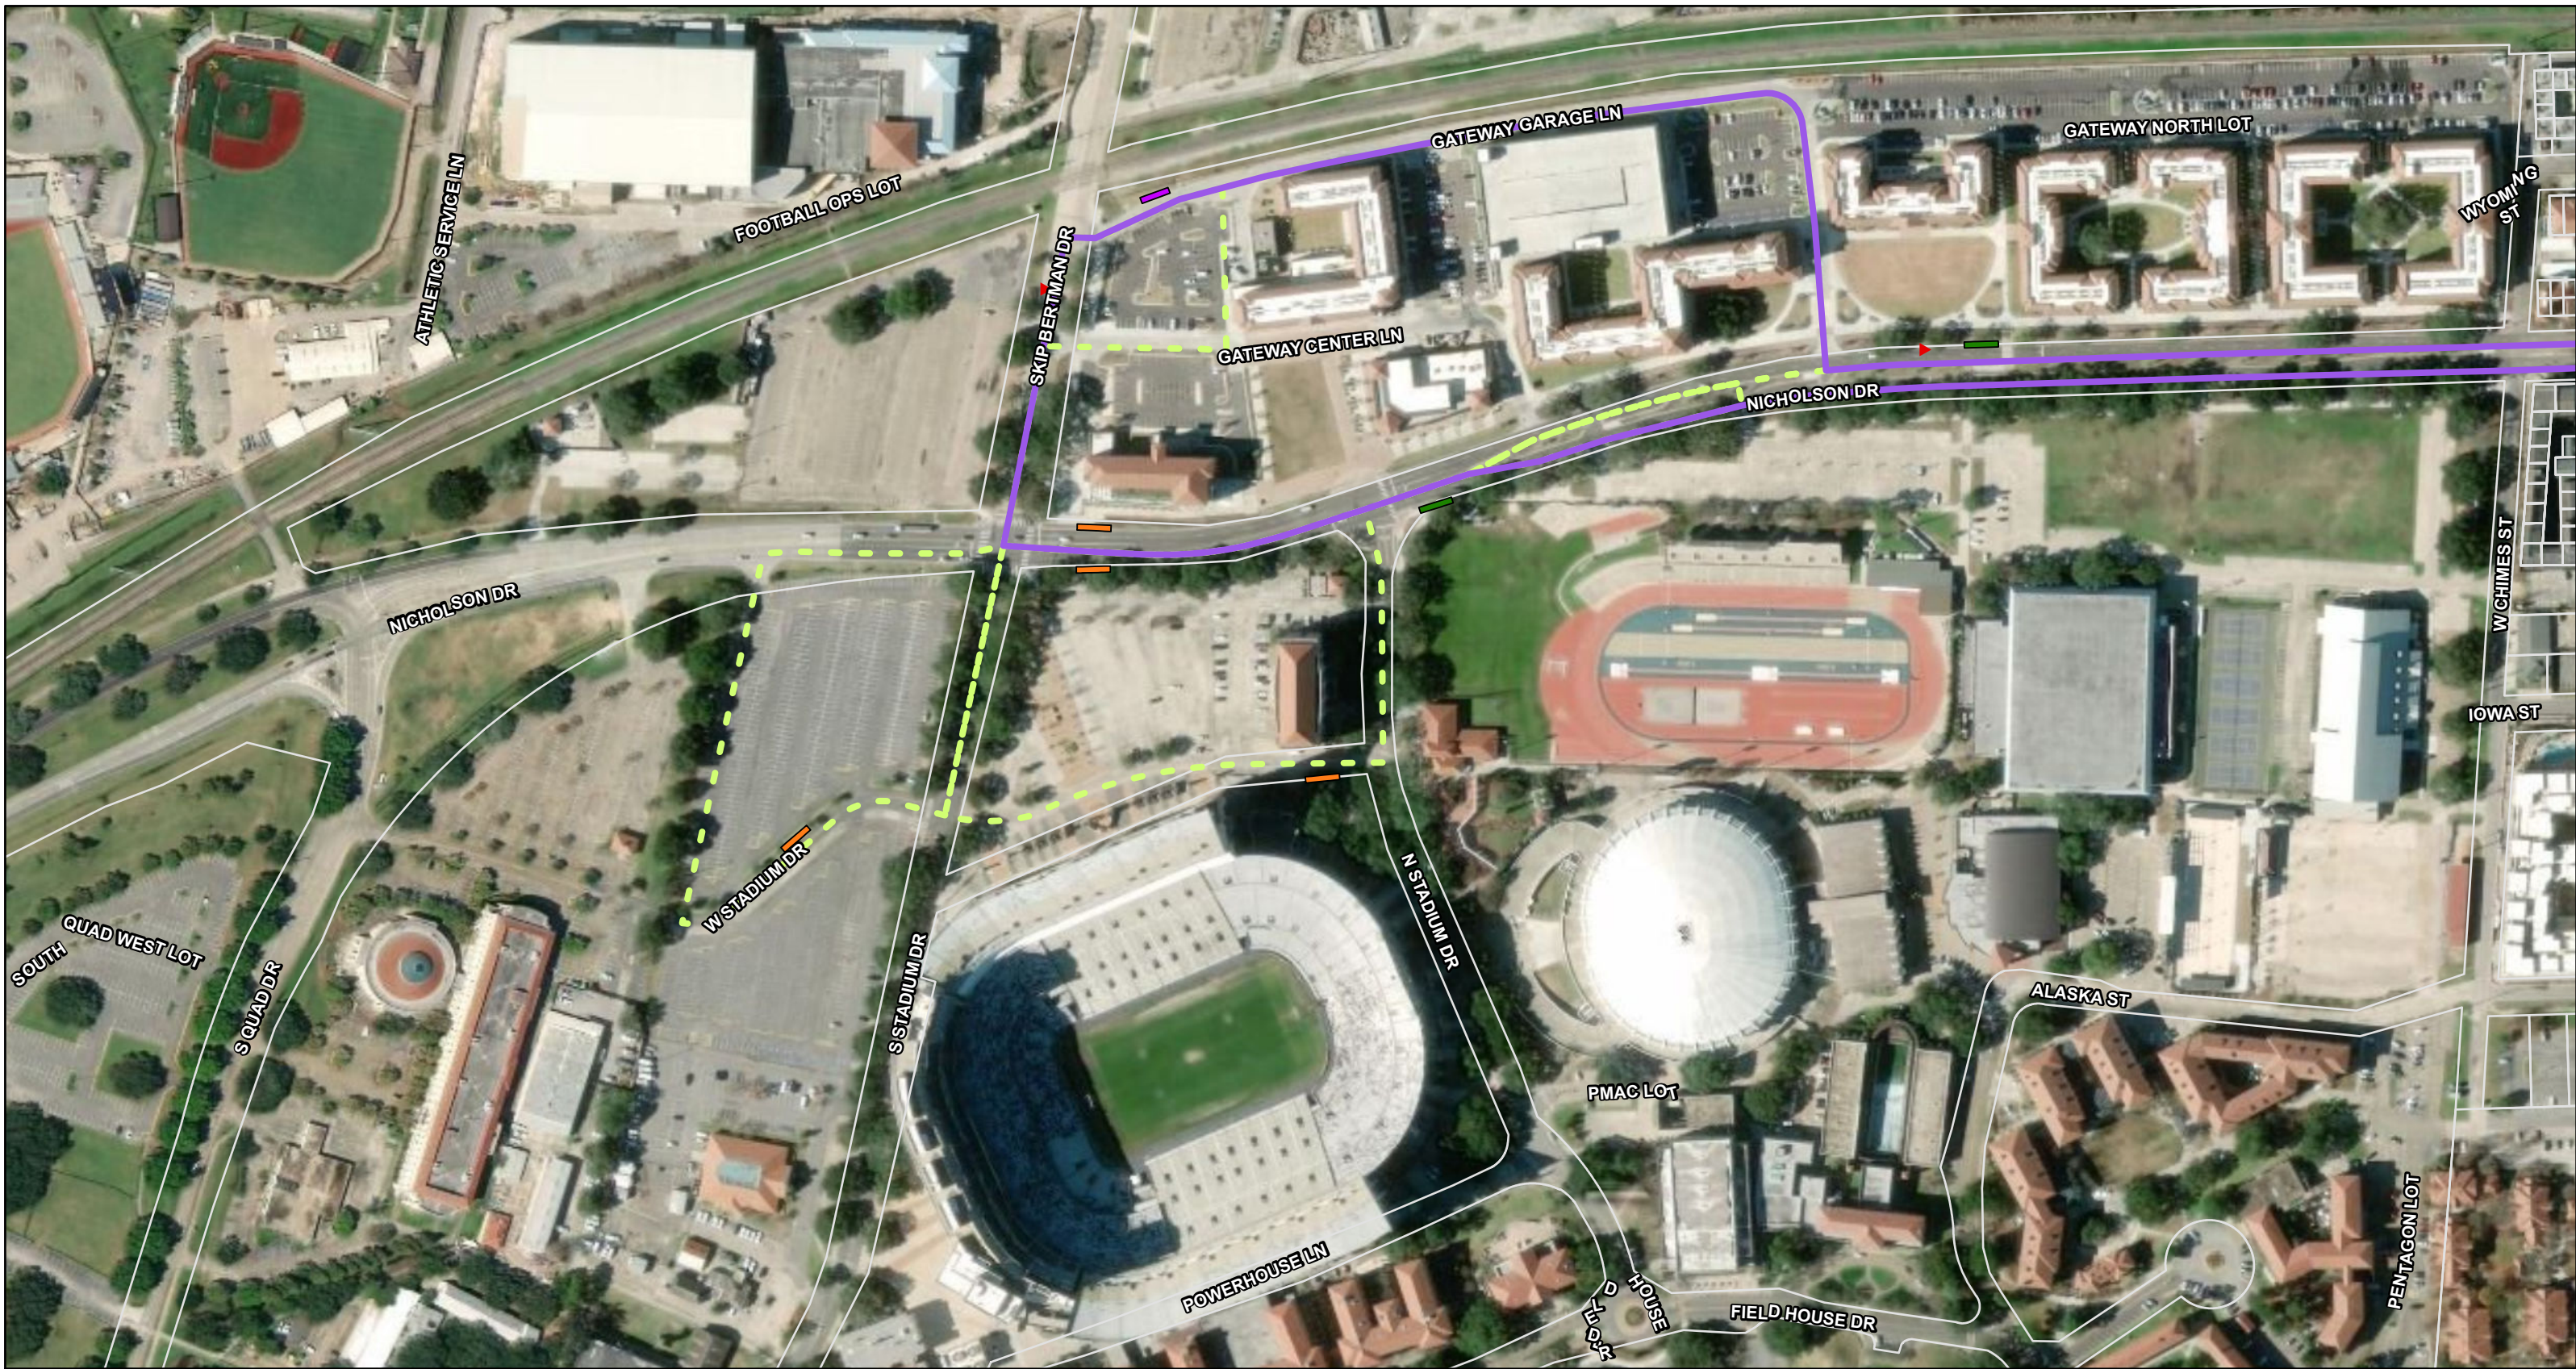

A review of the EPA FRS and the LDEQ hazardous material databases indicated that there are 74 properties (unique addresses) with listed or potential hazardous material concerns located near the proposed stations. There is a low risk of contamination during construction of the stations because the hazardous materials on these sites are contained within the buildings or located in areas that are set back from the street right-of-way line. In addition, some sites have already gone through cleanup procedures and therefore pose a low risk of contamination. If any hazardous materials are encountered during construction, the proper handling, treatment, and disposal of those materials will be in full compliance with all federal, state, and local requirements.
